	Experience:-Middle level supervision in Railway Operation and Traffic Relation.	
	Blood Group:-O+	Allergy:-None
<p>Profile (Knowledge and talent–strength)- Sociology as a discipline enable me enough to understand the relationship in different level, from mutual reciprocal relationship between two persons such as two lover in micro level to relationship between two or more states in macro level. On the other hand I am so fortunate to been working in Indian Railways as a frontline staff, which helps me to learning sociology in an applied manner.</p>		
<p>Learning (Career) from the Course–Valuation of Ecosystem Goods and Services (organised jointly by ENVIS Centres at IISc and EMPRI, Bangalore:- Before taking part in this course my world view was mainly anthropocentric. Now I know the world in a composite manner, in which everything related to everything else and the concept of wastage converted to conversion of material and biodiversity.</p>		

Upgraded Profile and your possible role in the future:- Present mode of production assigns everything an exchange value whether it is a commodity, love, landscape or beauty. But it is the sociability of the individual, rather than possessive individuality is the hope for future which enable us to have a peaceful coexistence with our surroundings. It is my understanding that not only discourse of development is to be changed, rather baconian discourse of science (dominion of man over nature) should be changed. The discourse of science should not be diametrically opposite of nature, rather it should be harmonistic with the nature. As I am a learned science communicator, in near future I will contribute educate student in the institutions in my area and towards better decisionmaking in my village panchayat ensuring that policy appraisals fully take into account the costs and benefits to the natural environment, traditional knowledge building, conservation and people biodiversity register.
