Ookla report shows that India has shown overall improvement in its global ranking for median fixed broadband speeds, moving from the 84th spot in March to the 83rd spot in April.

According to Ookla's April Speedtest Global Index, Senegal registered the highest increase in rank and gained 16 spots globally, with Qatar ranked No.1 for overall global median **mobile speeds**. For overall global fixed median speeds, Bahrain registered the highest increase in rank, jumping by 14 spots globally, with Singapore sustaining its rank No.1 this month as well in overall global fixed median speeds.

In case you are unaware, Ookla's Speedtest Global Index ranks mobile and fixed broadband speeds around the world on a monthly basis. According to a statement, the data for the Global Index comes from the hundreds of millions of tests taken by real people using Speedtest every month to test their Internet performance.

The report showed that VIL (Vi) has been losing subscribers during the past year. Disconnections have reportedly increased following the 5G launch in October 2022.

As per the report, speedtest users migrated away from VIL partially due to the operator's inability to launch 5G.
