

# Nature Science Internship Programme (NSIP)

---

DIVINE ENGLISH SCHOOL  
YESHWANTHPUR, BANGALORE - 22

# INTRODUCTION

- Group of 10 students along with two guide teachers were a part of the NSIP family.
- Students are grouped into two – one to study the terrestrial location (named as Terra) and one to study the water body ( Misty ).
- Students are in regular visit to the study area accompanied either by their teachers or by their parents.
- We are into covering every content from the manual.

# STUDY AREA AND MAPPING

- Area of study opted: J . P Park, Mathikere, Bangalore.

Map

# Location of sampling of water

- Samples of water collected from the lake at J.P Park.
- Three samples of water are collected – one at the inlet, one at the center and the last at the outlet of the lake.

# Location of sampling of soil

- Two samples of soil are collected from two different regions of the same park – one on the wet place and one on the children play area.

# Location of sighting of birds

- We were able to locate about 5 to 6 types of birds – few were visible and few were identified by there chirps.

# Location of sighting of butterflies

- We were able to locate nearly 10 to 15 types of butterflies.

# Details in fabrics

- Visited the near by textile shop and got the details of the fabrics.
- Yet to visit textile firm in the month of October and the rest of textile activities.
